

# Obtain Shareable Link for a Google Drive™ Folder

When you set up the Google Folder App, you need to let the app know to which Google Drive folder it should connect. You do this by inserting a link to that folder. Here's how you obtain that link.

1. Navigate to Google Drive and display the folder to which you wish to link.

2. Highlight the folder and click **Get link**. A dialog displays.

3. Copy the link. Click **Get link** again to dismiss the dialog. Return to *Site Manager* and paste the link into the *Google Drive Shareable Link* field
